

HRA Fall Arrest & Rescue Devices

These devices have been manufactured, tested and certified in Germany to conform to the European Standard DIN EN 360, as a Retractable Type Fall Arrest Device, and to DIN EN 1496, as a Rescue/Recovery Device.

The IKAR HRA Devices have been specifically developed to offer fall protection and rescue in one, easy to use unit.

Working similar to a car safety belt, during normal use the user can move freely whilst the galvanised steel cable life-line is kept under permanent tension. In the event of a fall the locking system will activate and the internal brake disk will absorb energy to well below the 6kN limit required by the DIN EN 360 standard.

In the case of a rescue, the rescue/recovery function can be quickly activated by snapping the side handle into place. The cable drum is now permanently locked to the handle shaft and by rotating the handle the casualty can be either lifted or lowered to a place of safety. The rescue/recovery function can be activated whether the cable is on free run or from the locked position after an arrested fall.

Product features:

- Easy to use, low-maintenance design
- Load carrying capacity
 - 1 person, 136kg – max
- Various cable lengths available
- Shockproof aluminium housing
- Single handed, double action hook to connect to the users harness
- Double action hook has swivel function to eliminate cable twisting
- Large carrying and attachment handle
- World renowned German build quality

Suggested accessories:

- Mounting bracket for IKAR DB-A1 and DB-A2 tripods
- 41-Z10 large attachment karabiner
- IK-AS steel cable anchor sling, in conjunction with
- SK small attachment karabiner
