AirGill Face Masks

What are they?

We know that there is no cure yet for COVID-19, but did you know that viruses can actually be killed in textiles?

The AirGill face mask is a modern looking, snug fitting, low profile face mask that provides additional protection from infection.

The masks are treated with Polygiene ViralOff technology, which reduces viruses and bacterias by 99% within a two-hour timespan. Meaning your mask stays clean without you having to wash the mask yourself.

Polygiene ViralOff Technology

ViralOff
POLYGIENE TECHNOLOGY

There are 3 key functions of any face mask...

- Captures coughs and sneezes of asymptomatic people
- Eradicate the risk of inhaling any stray air borne water droplets
- Prevents *auto inoculation*, which is the process of inadvertently placing your hands in and around your mouth

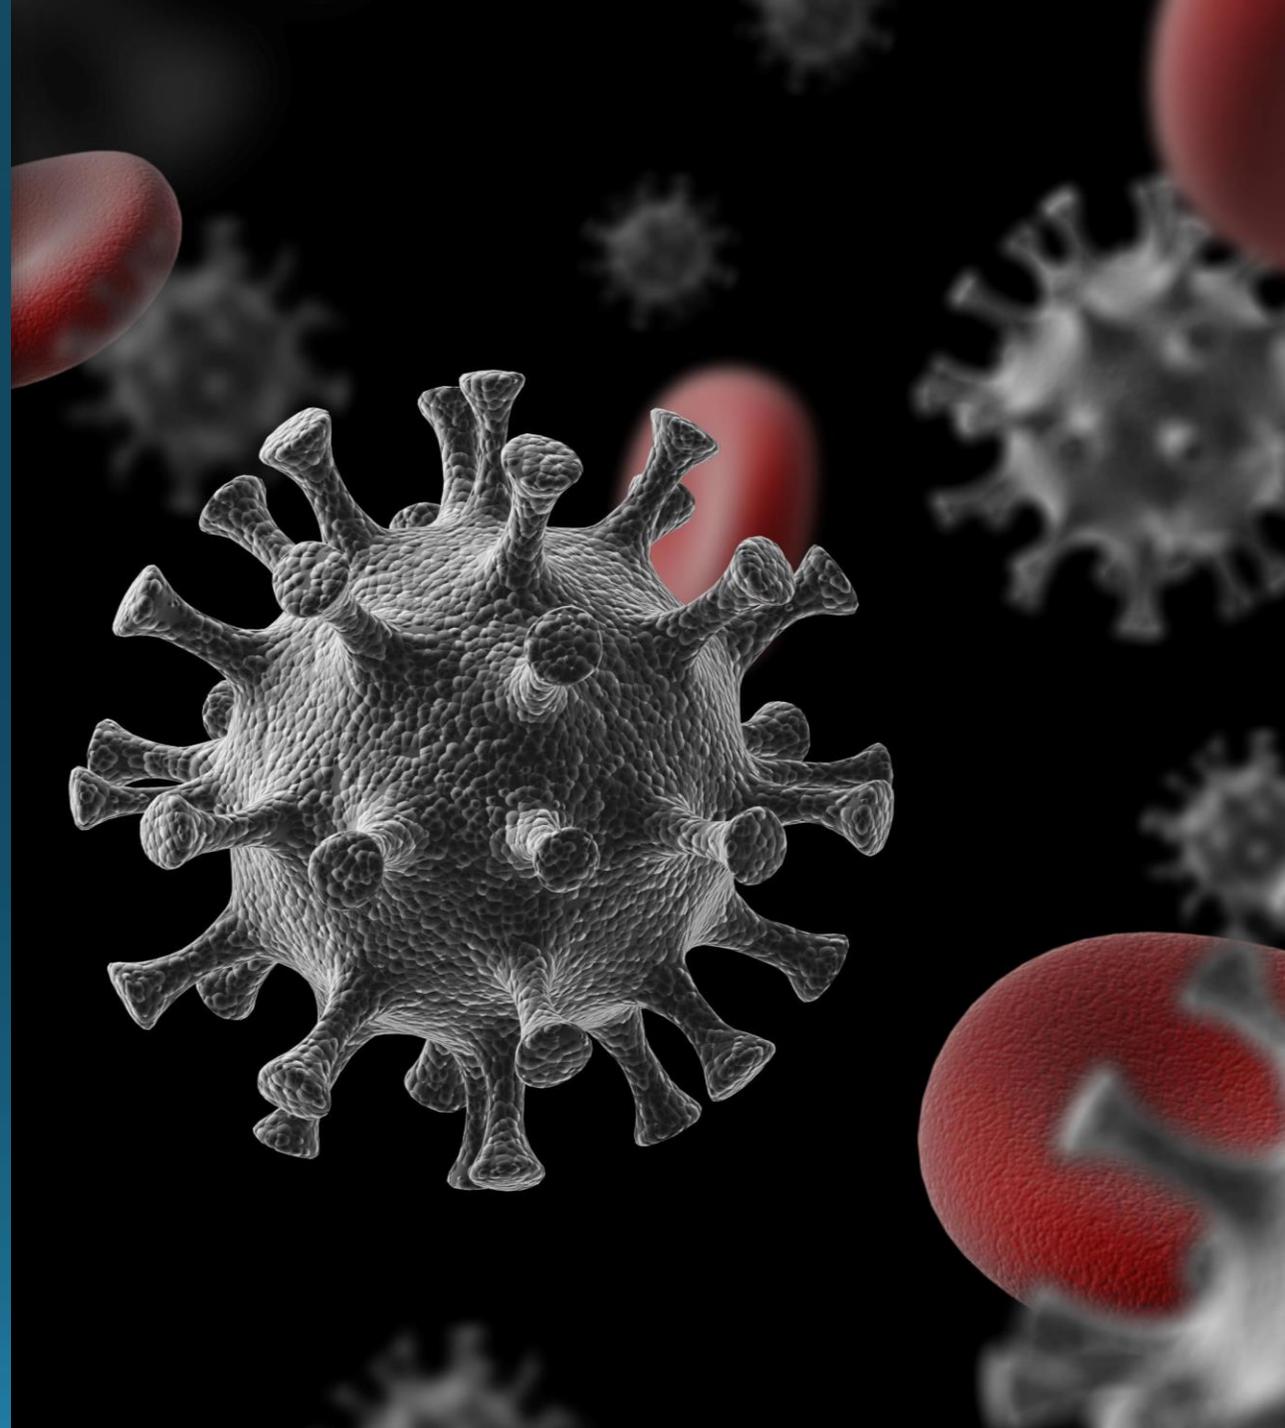

All these functions are designed to help prevent transmission of viruses - but what happens when the mask itself becomes contaminated?

Well, these AirGill masks also eradicate that problem. They are treated with Polygiene ViralOff technology, which is essentially like constantly washing your hands. The active ingredient in the mask itself is working all the time to reduce the bacteria and virus levels in the mask, meaning it will stay clean and free of bacteria and viruses without you physically having to wash the masks yourself.

Odor Crunch technology is incorporated into the masks, eradicating any bad odours or smells that may develop during the day.

COVID-19

- COVID-19 works in the same way as other enveloped viruses such as SARS and Influenza, which the active ingredients in ViralOff technology have been proven to have an affect on.
- There is no cure yet for COVID-19, but these masks prevent the transmission of the virus.

ViralOff Technology and Odor Crunch means you have to wash your AirGill Face Mask less frequently.

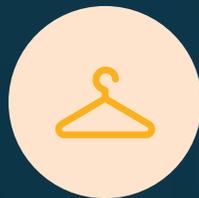

This means that you can...

WASH LESS

REDUCE YOUR
CARBON FOOTPRINT

EXTEND THE LIFETIME
OF THE GARMENT

SAVE ENERGY

SAVE WATER

SAVE TIME

SAVE MONEY

Wear More, Wash Less

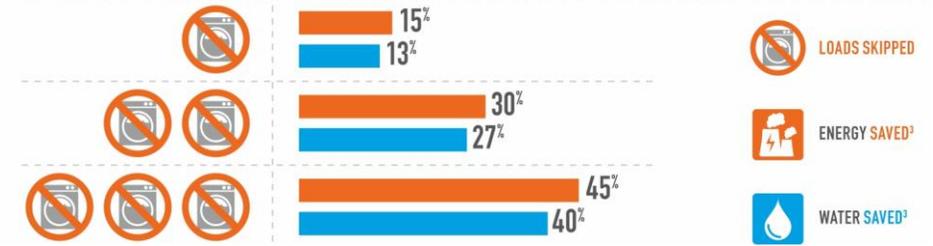

Polygiene[®]

ODOR CRUNCH

WASH LESS
SAVE ENERGY
SAVE WATER

The more you wear a garment between washes, the more you reduce the environmental impacts that occur during its lifecycle.

WASH LESS. SAVE TIME.⁶

The less you wash the more free-time you gain to do the things you enjoy.

Packaging

The masks come in factory re-sealable foil wrap with a retail slot to prevent any contamination.

The Packaging contains a wealth of information relating to Point of Sale and user benefits – and also includes QR codes linking you to websites where you can find out more about both the Polygiene ViralOff technology and the Odor Crunch technology.

From September, the masks will also be available in a Point of Sale dispenser, ohlding 25 masks per colour per size. The dimensions of the dispenser are 17cm x 14xm x 25cm

Testing

ViralOff
POLYGIENE TECHNOLOGY

The ViralOff Technology has been approved by:

Oeko-Tex

Bluesign

BPR

Reach

It has also been tested and approved for skin safety by,

Hohenstein – Germany

Kawai laboratories - Japan

Class 1 medical device – UK

Medically Tested for Toxins by FKT Germany
