HWS9 Fall Arrest Device

This device has been manufactured, tested and certified in Germany to conform to the European Standard DIN EN 360, as a Retractable Type Fall Arrest Device.

The IKAR HWS9 Device has been specifically developed to offer fall protection in an easy to use unit.

Working similar to a car safety belt, during normal use the user can move freely whilst the galvanised steel cable lifeline is kept under permanent tension. In the event of a fall the locking system will activate and the internal brake disk will absorb energy to well below the 6kN limit required by the DIN EN 360 standard.

This low maintenance device has a hard wearing, shockproof aluminium housing and offers extremely low weight for the length of the life-line. The unit has a swivelled eye attachment point to prevent the life-line from twisting.

The IKAR HWS9 Device has been subjected to additional testing for horizontal use and can therefore be used where the user could potentially fall over a leading edge.

Product features:

- Easy to use, low-maintenance design
- Load carrying capacity
 - 1 person, 136kg max
- 9.0m galvanised steel cable life-line
- Additional cable lengths available to special order
- Shockproof aluminium housing
- Single handed, double action hook to connect to the users harness
- Attachment eye has swivel function to eliminate cable twisting
- Low unit weight
- World renowned German build quality

Suggested accessories:

- SK small attachment karabiner
- IK-AS steel cable anchor sling
- IK-AB webbing anchor sling
- IK1B50D webbing attachment lanyard for easy connection to the harness rear attachment point
